Objective

Passionate and self-motivated Computer Science Engineering student with a strong interest in Artificial Intelligence, Machine Learning, and Natural Language Processing. Seeking an AI/ML Engineer role to apply my Python programming, Machine Learning, Deep Learning and AI skills to develop intelligent, data-driven solutions, gain practical industry experience and contribute to innovative projects.

Experience

Academic Research:

- Conducted technical research on emerging technologies to support academic projects.
- Collected, analysed, and summarized information from reliable technical sources.
- Collaborated with teammates to prepare project documentation and presentations.
- Improved problem-solving and analytical skills through research-based learning.

Education

B.E, Shri Madhwa Vadiraja Institute of Technology and Management	2023 – Present
CGPA: 7.62	Bantakal
12th standard (PCMB), Vidyodaya PU College	2023
88.33%	Udupi
10th standard, Vidyodaya Public School	2021
90.33%	Udupi

Skills

- **Programming Languages:** Python, Java, C
- **AI:** AI, Machine Learning, Natural Language Processing, Generative AI
- **Libraries:** OpenCV, Tesseract OCR
- **Web Technologies:** HTML, CSS, JavaScript, React
- **Database:** SQL (MySQL), MongoDB
- **Tools:** Git, GitHub, VS Code.

Projects

AI-Based Smart Traffic Congestion Optimization

- Developed an AI-powered traffic management system that analyzes real-time traffic conditions to optimize signal timings, reduce congestion, and improve traffic flow using intelligent decision-making.
- Technologies: Python, OpenCV, Ultralytics YOLOv8, Flask, React.js, HTML, CSS, JavaScript, TensorFlow.
- Results: Optimized signal timing, improved traffic-flow management, and demonstrated intelligent traffic control.

Accident Alert & Emergency Response System

- Developed an AI-powered accident management system that uses OCR-based number plate recognition and geo-tagging to detect accidents, identify vehicles, and automatically notify nearby hospitals and authorities for faster emergency response.
- Technologies: Java, Tesseract, GPS/Geo-tagging, MongoDB, Twilio.
- Results: Automated accident reporting, reduced manual intervention, enabled faster emergency response, and improved the accuracy and accessibility of accident information.

Criminal Record Management System

- Developed a role-based web application for secure criminal record management, enabling authenticated police officers to perform CRUD operations, search records, and manage criminal data through a responsive interface with role-based access control.
- Technologies: Next.js, TypeScript, React.js, Tailwind CSS, Flowbite React, Axios, Python, Flask, MongoDB, Vercel.
- Results: Implemented secure login, role-based authentication, dynamic CRUD operations, search functionality, responsive UI, and a scalable architecture ready for backend API integration.

Languages

- English
- Kannada
- Hindi

Certificates

- AI Literacy – IBM SkillsBuild
- Hands-on workshop on Git and GitHub
- Webworks workshop on HTML, CSS, JavaScript

Strength

- Strong analytical and problem-solving skills
- Quick learner with adaptability to new technologies
- Team collaboration, communication and attention to detail
- Time Management

Summary

- Computer Science Engineering student with strong foundation in Python, AI, ML, and NLP.
- Hands-on experience developing AI-based, full-stack, and database-driven applications.
- Quick learner with the ability to adapt to new technologies and work effectively in team environments.
- Passionate about building intelligent, data-driven solutions to solve real-world problems, with strong analytical, problem-solving, and communication skills.
- Seeking an entry-level AI/ML Engineer role to apply my technical expertise, gain industry experience, and further develop my skills in emerging AI technologies.
