Objective

Computer Science Engineering student with hands-on experience in Artificial Intelligence, Machine Learning, Generative AI, and AI-based application development. Skilled in Python, AI tools, research, data analysis, and developing technology-driven solutions. Strong analytical and problem-solving abilities with a quick-learning mindset and interest in emerging AI technologies. Seeking an AI Intern role to contribute to research, experimentation, insight generation, and practical AI solutions.

Experience

Academic Research:

- Researched emerging technologies and AI-related concepts to support academic projects.
- Collected, analyzed, and summarized information from reliable technical sources.
- Synthesized technical findings into structured documentation and presentations.
- Collaborated with teammates to analyze information, solve problems, and communicate findings effectively.

Education

B.E., *Shri Madhwa Vadiraja Institute of Technology and Management*

CGPA: 7.62 | 2023 - Present

12th standard (PCMB), *Vidyodaya PU College*

88.33% | 2023

10th standard, *Vidyodaya Public School*

90.33% | 2021

Skills

- **Programming:** Python, Java, C, JavaScript
- **AI & ML:** Artificial Intelligence, Machine Learning, Natural Language Processing, Generative AI
- **AI Tools & Techniques:** Prompt Engineering, AI-assisted analysis, OCR, Computer Vision
- **Libraries/Frameworks:** OpenCV, Tesseract OCR, TensorFlow, YOLOv8
- **Data & Databases:** SQL (MySQL), MongoDB
- **Web Technologies:** React.js, HTML, CSS
- **Tools:** Git, GitHub, VS Code

Projects

AI-Based Smart Traffic Congestion Optimization System

- Developed an AI-powered system to analyze traffic conditions and recommend adaptive signal timings for improved traffic flow.
- Applied computer vision and AI techniques for vehicle detection, counting, and traffic-density analysis.
- Integrated the AI processing pipeline with a web-based application for presenting traffic insights and recommendations.
- Technologies: Python, YOLOv8, OpenCV, TensorFlow, Flask, React.js
-

Accident Alert & Emergency Response System

- Developed an AI-assisted accident management system using OCR-based number plate recognition and geo-tagging.
- Processed vehicle information to identify accident-related data and support automated emergency response.
- Integrated vehicle identification, location information, database storage, and automated notifications.
- Technologies: Java, Tesseract OCR, GPS/Geo-tagging, MongoDB, Twilio
