## Objective

Computer Science Engineering student with hands-on experience developing web applications using React.js, Next.js, JavaScript, TypeScript, HTML, CSS, and Tailwind CSS. Experienced in building responsive user interfaces, integrating APIs, and developing full-stack applications with database connectivity. Strong problem-solving and analytical skills with a passion for frontend development and modern web technologies. Seeking a React Developer Intern role to contribute to user-focused web applications and gain hands-on industry experience.

## Education

**B.E.**, *Shri Madhwa Vadiraja Institute of Technology and Management*

CGPA: 7.62 | 2023 - Present

**12th standard (PCMB)**, *Vidyodaya PU College*

88.33% | 2023

**10th standard**, *Vidyodaya Public School*

90.33% | 2021

## Skills

- **Languages:** JavaScript, TypeScript, Java, Python, C
- **Frontend:** React.js, Next.js, HTML5, CSS3, Tailwind CSS
- **Backend:** Node.js, Express.js, Flask, REST APIs
- **Database:** MongoDB, SQL (MySQL)
- **Tools:** Git, GitHub, VS Code
- **AI/ML:** Machine Learning, Generative AI, OpenCV, Tesseract OCR, YOLOv8

## Projects

### Criminal Record Management System

- Developed a responsive web application using React.js and Next.js for secure criminal record management.
- Built reusable user interface components and implemented dynamic CRUD operations, search functionality, and authenticated role-based access.
- Integrated frontend components with backend APIs and MongoDB for data management.
- Technologies: React.js, Next.js, TypeScript, Tailwind CSS, Axios, Flask, MongoDB

### AI-Based Smart Traffic Congestion Optimization System

- Developed a web-based application to analyze traffic conditions and provide adaptive signal timing recommendations.
- Built the application interface using React.js and integrated it with a Flask backend and AI processing pipeline.
- Implemented vehicle detection, counting, and traffic-density analysis using computer vision techniques.
- Technologies: React.js, Flask, Python, YOLOv8, OpenCV, TensorFlow

### Accident Alert & Emergency Response System

- Developed an application for accident management using OCR-based number plate recognition and geo-tagging.
- Integrated vehicle identification, location information, database storage, and automated notifications.
- Designed the system to reduce manual intervention and support faster emergency response.
- Technologies: Java, Tesseract OCR, MongoDB, GPS/Geo-tagging, Twilio
