Objective

A passionate and self-motivated Computer Science Engineering student with a strong interest in software development and problem-solving. Seeking an entry-level Software Developer role where I can leverage my knowledge of Java, Python, HTML, CSS, SQL, and web development to create efficient and innovative software solutions. Eager to gain practical experience, continuously enhance my technical skills, and contribute to the organization's growth while developing as a software professional.

Experience

- Academic Research:
 - Conducted technical research on emerging technologies to support academic projects.
 - Collected, analyzed, and summarized information from reliable technical sources.
 - Collaborated with teammates to prepare project documentation and presentations.
 - Improved problem-solving and analytical skills through research-based learning.

Education

- | | |
|---|---------|
| • Vidyodaya Public School, Udupi
10th standard
90.33% | 2020-21 |
| • Vidyodaya PU College, Udupi
12th standard (PCMB)
88.33% | 2022-23 |
| • Shri Madhwa Vadiraja Institute of Technology and Management,Bantakal
B.E in Computer Science and Engineering
7.53 | 2023-27 |

Skills

- Programming languages: Java, Python, C
- Web Technologies: HTML5, CSS3 , Javascript.
- Database: SQL (MySQL), MongoDB
- Tools: Git, GitHub, VS Code.

Projects

- Accident Alert & Emergency Response System
 - Developed an AI-powered accident management system that uses OCR-based number plate recognition and geo-tagging to detect accidents, identify vehicles, and automatically notify nearby hospitals and authorities for faster emergency response.
 - Technologies: Java , Tesseract, GPS/Geo-tagging, MongoDB, Twilio.

- Results: Automated accident reporting, reduced manual intervention, enabled faster emergency response, and improved accident information accuracy.
- AI-Based Smart Traffic Congestion Optimization
 - Developed an AI-powered traffic management system that analyzes real-time traffic conditions to optimize signal timings, reduce congestion, and improve traffic flow using intelligent decision-making.
 - Technologies: Python, OpenCV, Ultralytics YOLOv8, Flask, React.js, HTML, CSS, JavaScript, TensorFlow.
 - Results: Reduced traffic congestion, optimized signal timing, improved vehicle movement efficiency, and supported smarter urban traffic management.
- Criminal Record Management System
 - Developed a role-based web application for secure criminal record management, enabling authenticated police officers to perform CRUD operations, search records, and manage criminal data through a responsive interface with role-based access control.
 - Technologies: Next.js, TypeScript, React.js, Tailwind CSS, Flowbite React, Axios, Python, Flask, MongoDB, Vercel.
 - Results: Implemented secure login, role-based authentication, dynamic CRUD operations, search functionality, responsive UI, and a scalable architecture ready for backend API integration.

Achievements & Awards

- AI Literacy - IBM SkillsBuild
- Hands-on workshop on Git and GitHub
- Webworks workshop on HTML, CSS, Javascript

Languages

- English
- Kannada
- Hindi

Strength

- Strong analytical and problem-solving skills
- Quick learner with adaptability to new technologies
- Team collaboration, communication and attention to detail
- Time Management

Summary

- Computer Science Engineering student with strong foundation in software development and problem-solving.
- Hands-on experience in developing AI-based, full-stack, and database-driven applications.
- Quick learner with the ability to adapt to new technologies and work effectively in team environments.
- Passionate about building innovative software solutions and continuously enhancing technical skills.
- Seeking an entry-level Software Developer role to contribute and grow in a dynamic organization.
